What is a central vacuum system?

ALTO CENTIX 60 is a central vacuum cleaner unit that can be installed virtually anywhere in your home: your basement, garage, closet or in a pantry. To use it, all you have to do is plug the hose into an inlet valve. A simple system of PVC pipes connected to inlet valves is installed around your home, leading the dust to the powerful remote vacuum unit. The dirt is collected in the 27-liter large bin, which will only need emptying from 2-4 times per year, depending on your situation. The fine dust particles and the typical vacuum odor contained in the exhaust air is directed to the outside atmosphere via a ventilation hole.

Clean & Healthy

Dust allergists are calling a traditional vacuum cleaner a “dust blower”. Up to 80% of the dust that is removed by a traditional vacuum cleaner is blown out into the same room again – from the other end of the vacuum cleaner. With an ALTO CENTIX 60 the dust is vented outside the house. And this means a healthier home environment.

Quick & Easy

No vacuum to carry around and no cables to handle any more. You only need to carry the flexible lightweight hose around with you when you vacuum the house.

Silent & Comfort

As the vacuum unit is installed outside of the living area, the only thing you hear is a silent whispering. Vacuuming becomes much easier and more comfortable.

You don't have to carry the machine around the house with you; all you need is to insert the lightweight hose into the inlet valve, and that's it.

The inlet valves are connected to simple built-in plastic pipes. All the dirt that you vacuum is transported through the pipes to the remote vacuum unit.

When the powerful vacuum cleaner is located away from your normal living areas, only the lightweight hose is needed to clean e.g. the stairs.

A popular option with the ALTO central vacuum cleaner is the VacPan. You simply toe-kick the VacPan's switch and sweep the debris into the wide floor level mouth, whisking the dirt away.

ALTO's powerful central vacuum system is the perfect solution for a healthier and cleaner home.

The installation is not difficult

Can also be installed in old houses

Whether your home is a new home or centuries old, a central vacuum cleaner can be installed. Fitting is simple. The pipes and fittings can speedily be installed without having special knowledge or experience. Put on your work gloves and set aside a weekend. That's all the time it takes.

When not in use, all you will see of the central vacuum cleaner is the discreet inlet valves. They can be located in central places along the floor or the walls, wherever they are practical.

To vacuum your car, all you need is to take the vacuum cleaner down from the wall bracket and use it as a portable vacuum.

How many inlet valves are needed?

Simply use a 9 m long rope and extend it between the possible place where an inlet valve can be and the corners of the rooms you want to clean.

ALTO offers two installation kits with 2 or with 3 inlet valves. The installation kit 2 with 2 inlet valves is recommended for houses up to 150 m², and the installation kit 3 with 3 inlet valves is for houses up to 250 m². The extra inlet valves are part of our accessories, in principle you can install as many as you want.

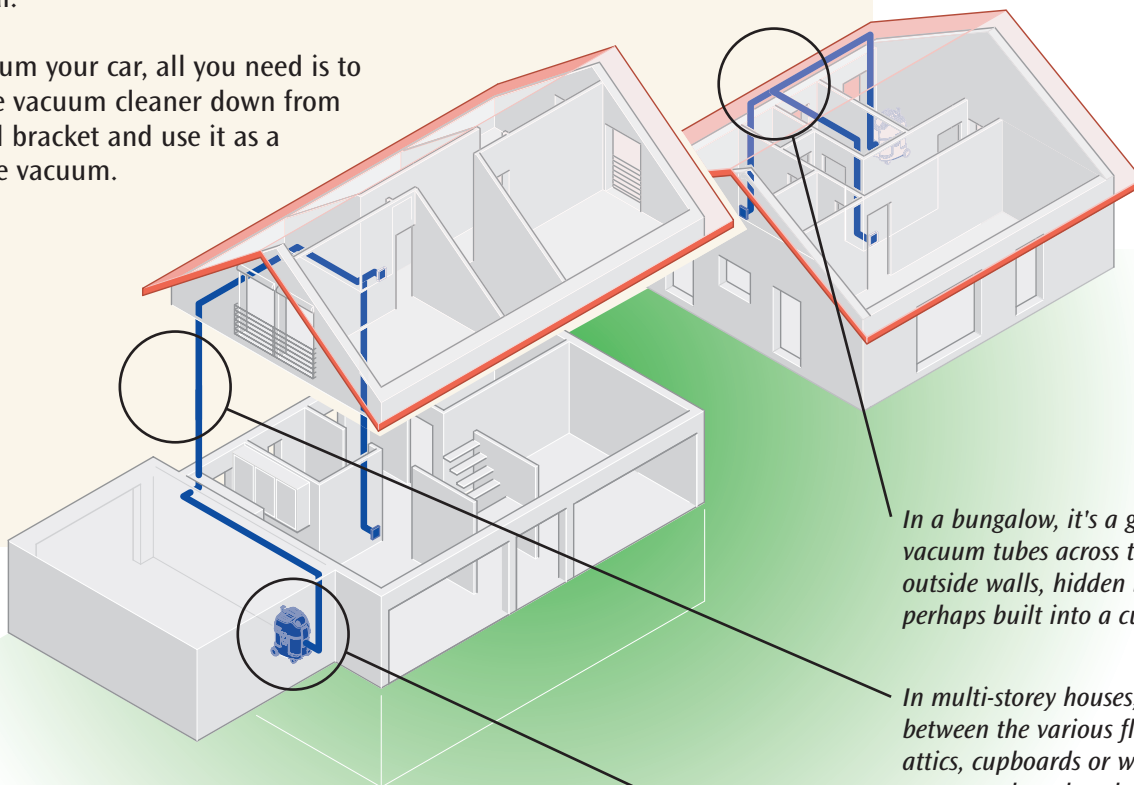

The ALTO CENTIX 60 is available in two variants:

ALTO CENTIX 60

Comes with a lightweight suction hose and with a curved tube. As soon as you plug the hose into the inlet valves, the vacuum motor starts automatically, as it automatically stops when you unplug it.

ALTO CENTIX 60 PREMIUM

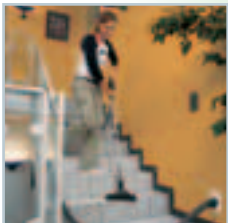

Is delivered with a lightweight special hose that has an on/off switch on the hand tube. Just flick the switch and it will activate the remote unit. Included is also an extra hose that can be used when you for example are vacuuming your car.

In a bungalow, it's a good idea to run the vacuum tubes across the loft or along the outside walls, hidden beneath a panel or perhaps built into a cupboard.

In multi-storey houses, the tubes can run between the various floors via crawl spaces, attics, cupboards or wall ducts. You could even run the tubes through a disused chimney shaft.

The actual vacuum cleaner is hidden away in a garage, utility room or cellar, where it won't bother anyone, with the noise. You quite simply hang it on the wall using the accompanying wall bracket.

Ready to Go

All you need is two boxes and you will have all you need for your new vacuum system, including a detailed installation guide.

- Choose between ALTO CENTIX 60 or the ALTO CENTIX 60 PREMIUM depending on your preference for the type of hose
- Choose between ALTO installation kit 2 or ALTO installation kit 3 depending on the size of your house.

ENJOY!
